

How does the audio guide work?

You can find 17 different stations about plants and the Sustainable Development Goals in the tropical greenhouse. Furthermore, you can learn which changes are needed and what you can do to help and make positive changes. Each station contains its own QR-code. By using an app or your phone camera you can scan these codes. Put your headphones in and listen to the most important information. The QR-codes are made by students.

If you don't have enough time to listen to all of them you can also listen to them on our website!
