

# **Design Research in the light of**

**\* Techno-/Cyberfeminism**

**\* Critical Computing**

**\* New Materialism(s)**

CF+ Workshop, University Kassel

Dr. Sandra Buchmüller, Technische Universität Braunschweig, Institut für Flugführung

Wissenschaftliche Mitarbeit an der Professur „Gender, Technik, Mobilität“

# Overview

---

- What I've learned/refreshed from CF+ Workshops: Techno-/ Cyberfeminism, Critical Computing, New Materialism and their relations to each other
- A Personal Survey: My Design Research in the Light of the three Perspectives/ Paradigms (?)
  - Feminist Theories turns Design into a scientific discipline
  - How can feminist epistemologies inform the design research and development process: My feminist Design Research and Development Framework (FEDELOP)
- Points of Criticism and for Discussion
- Outlook: „Research through Design“ as a Model for Technofeminist Future Perspectives for power critical and gender aware Design Research and Practice

# What I've learned or refreshed from CF+ Workshops

# What I've learned so far or refreshed from CF+ Workshops

## Technofeminism as an umbrella term (Caroline Sollfrank)

---

# What I've learned so far or refreshed from CF+ Workshops

## ...embracing Cyberfeminism

---

**Technofeminism**

**Cyberfeminism**

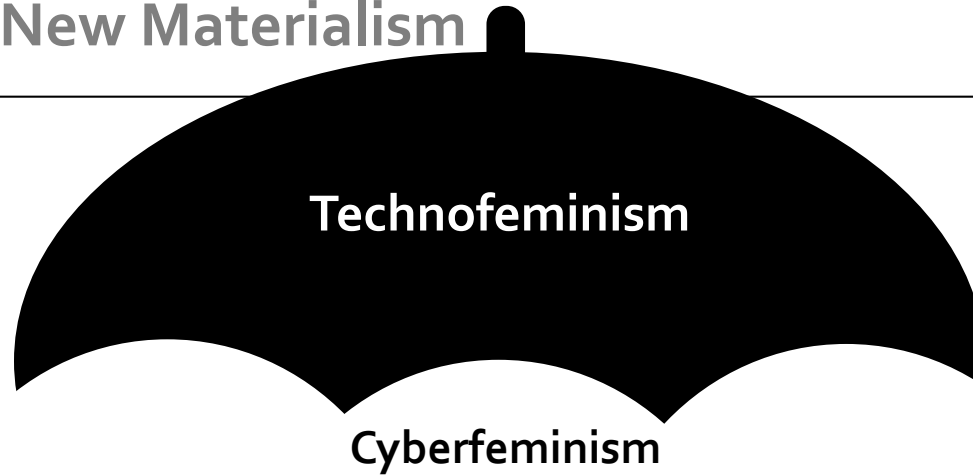

(1991-2001)

Optimistic view on technology regarding it - especially the internet („cyberspace“) – as emancipating, liberating and empowering space to establish new identities/ ontologies besides discriminating bodily representations and properties and new forms of practices and participation (for women)

# What I've learned so far or refreshed from CF+ Workshops

## ...embracing New Materialism

---

### **New Materialism(s)**

The current feminist epistemology that values matter over symbolic representation and regards knowledge as a result from an entangled process of knowing and being that constitute each other. It looks at the mechanisms how boundaries or differences are constructed; as a feminist ethico-onto-epistemology it also contains an ethic that strives for the responsible production of any matter as a process of intra-action of human and non-human actors based on the attitude of care for the made cuts and materializations and its socio-material consequences.

# What I've learned so far or refreshed from CF+ Workshops

## ...needing Critical Computing

---

**Technofeminism**

**Cyberfeminism**

**New Materialism(s)**

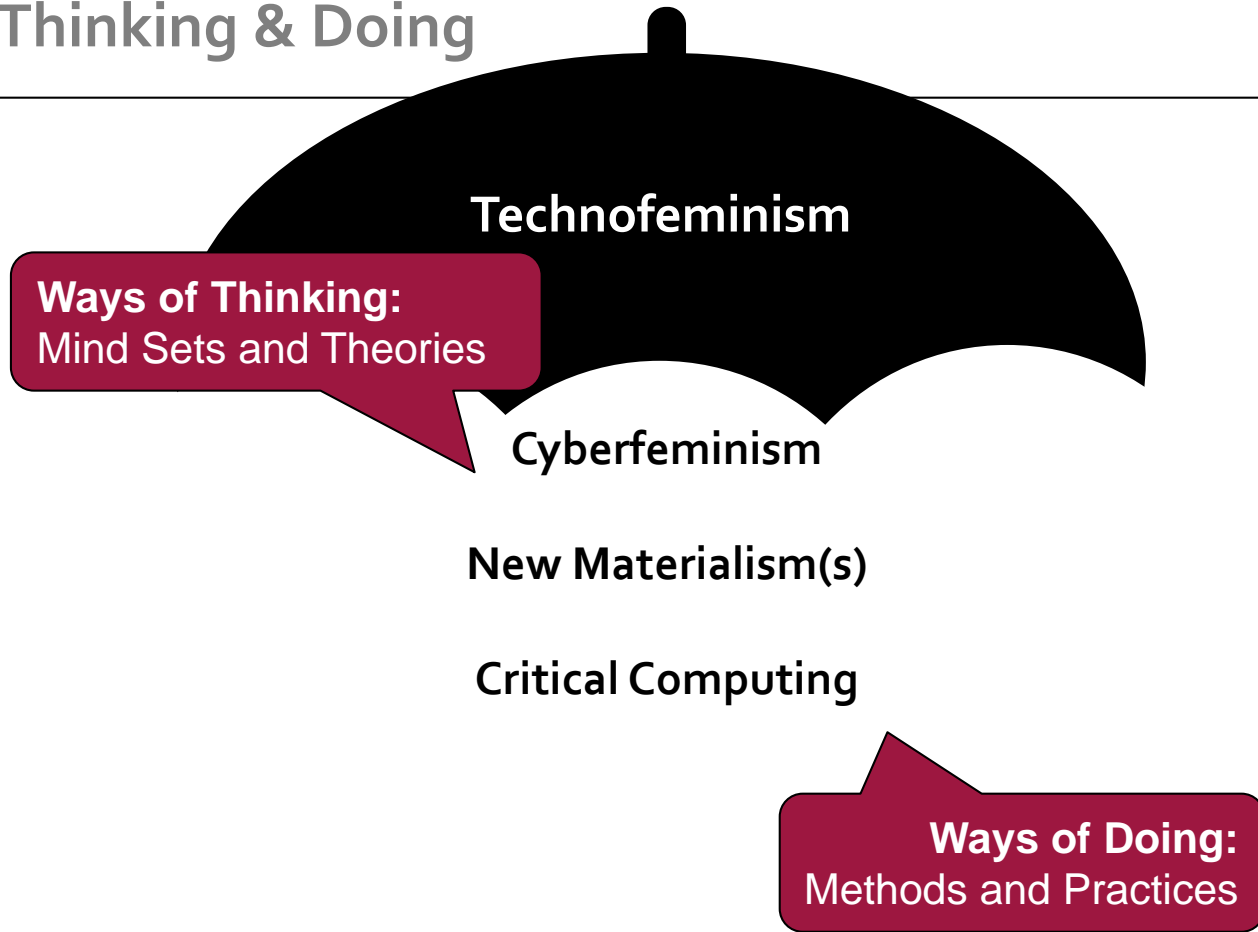

**Critical Computing**

implies that technology – including the practices and fabrics of informatics (e.g. algorithms) – has politics and can be done critically; it provides methods and tools that can be used to counteract oppressions, discriminations, inequalities, e.g. by shifting boundaries, modifying power structures including categories / ontologies like nature/ culture, mind/ body, human/ machine, rationality/ emotionality, subjectivity/ objectivity....

# What I've learned so far or refreshed from CF+ Workshops

## Ways of Thinking & Doing

---

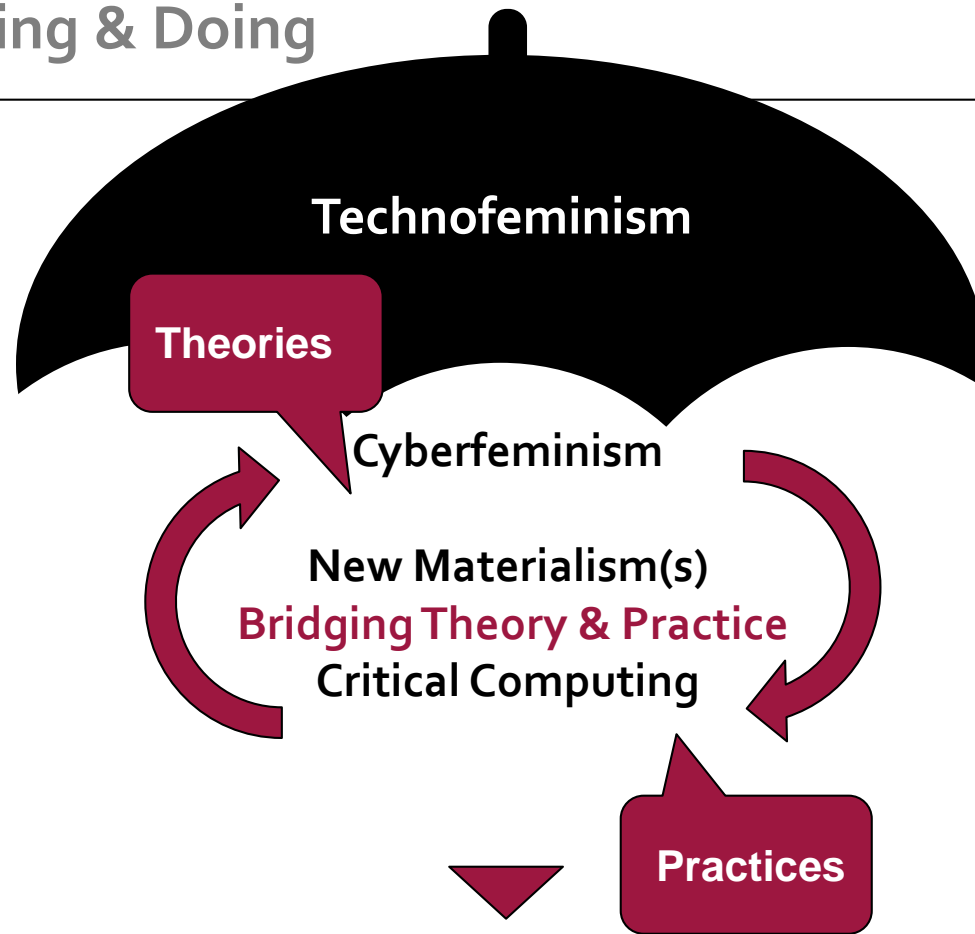

# What I've learned so far or refreshed from CF+ Workshops

## Ways of Thinking & Doing

---

**Technofeminist-reflective Techno-Practice** that produces matter based on an attitude of care for liveable, sustainable human and non-human worlds

# Focus of my Talk

## My Design Research

---

Technofeminism

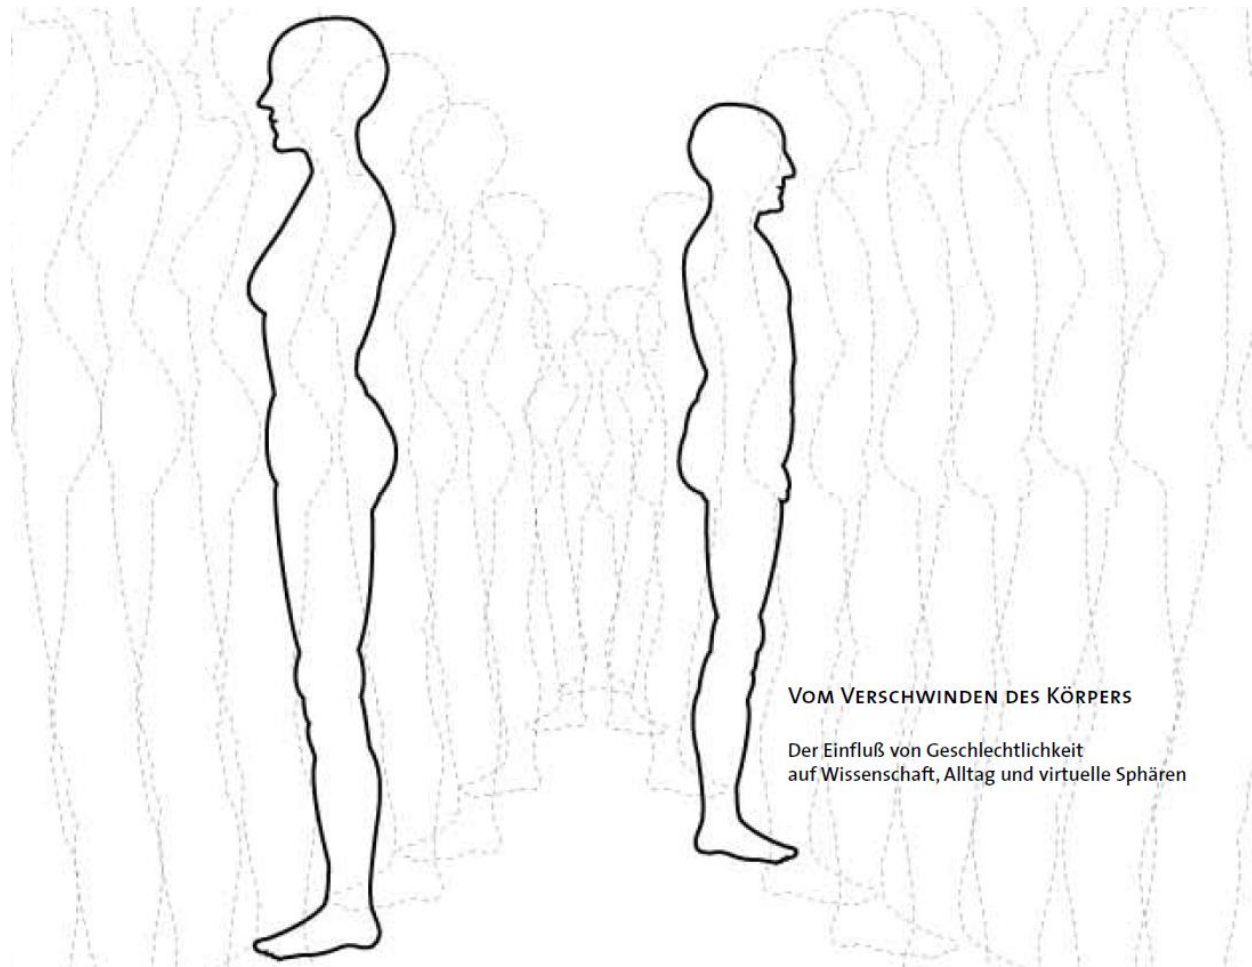

Cyberfeminism

New Materialism(s)

Critical Computing

I take the invitation to this CF+ Workshop an opportunity to make a kind of a **personal survey to reflect my work and projects at the intersection of gender and design** from the early days of my design education up to now with reference to the mentioned concepts.

# My Design Research

The influence of gender on science, everyday life and virtual spaces

# 2001 Diploma@Köln International School of Design

## Virtual body Representations, inspired by Cyperfeminist Visions

Analysis of the Online-Role-Playing Game LambdaMOO with a text-based interface

```
Telnet lambda.moo.mud.org
How to Speak
-----
One of the most important aspects of MOO is communication. With people
connected to the MOO from all around the world, you would obviously like to
talk to them. This can be done quite easily through the "say" command.

To experiment with speaking, enter the following:
  say Hello there. I am new here.

With any luck, what you see on your screen should look like this:
  You say, "Hello there. I am new here."
  [Everyone else sees, Magenta_Guest says, "Hello there. I am new here."]

The "everyone else" referred to is any other characters in the room you're
currently in. The tutorial is showing you what those people would have seen
had they been there to listen.

You can abbreviate the say command to a single double-quote (<>).
  "Hello there. I am new here.

This will provide the exact same result as the slightly longer command did
before. You do not need to append another double-quote to your command since
they are automatically provided.

["next" for next topic, "back" for previous, "again" to repeat current topic]
"hello. I'm a newbie!
You say, "hello. I'm a newbie!"
[Everyone else sees: Magenta_Guest says, "hello. I'm a newbie!"
next
Non-verbal Communication
-----
Now that you're familiar with the say command, you're capable of talking with
people to your heart's content. But what if you want to express yourself in
some other way besides speaking? If you're feeling happy, it would seem a
bit stilted to say "I am happy", when there are numerous ways you would
express this in real life, such as smiling or laughing. You can communicate
non-verbally by using the emote command.

"Emote" allows you to make statements about what you are doing. These actions
have no effect upon the MOO, other than to express to people what you're
feeling or thinking. To try this, use the command:
  emote smiles happily.

You should see:
  Magenta_Guest smiles happily.

This can, like say, be abbreviated, this time to a colon (:). As mentioned
above, an emote has no actual effect, so if you typed:
  :throws Haakon out of the house.

People would see
  Magenta_Guest throws Haakon out of the house.
but Haakon *wouldn't* go anywhere. Nothing has actually happened, except
maybe you have made someone angry.

When someone enters a room or announces that they are going to leave, it is
common to use emote to wave at them, to welcome them or say goodbye
respectively.

Emoting can be used to represent events that have not occurred, but this is
generally not encouraged. A simple way of looking at it is you can emote
anything about yourself, but if you involve others they may get annoyed.
```

## Virtual body Representations, inspired by Cyperfeminist Visions

---

Analysis of the **Online-Role-Playing Game LambdaMOO** with a text-based interface

```
Available genders: neuter, male, female, either, Spivak, splat, plural,  
egotistical, royal, or 2nd
```

Offer of 10 gender categories

Default gender category: ,neuter`

Category of `genderlessness': Spivak

*"To adopt the **Spivak** gender means to abjure the gendering of the body ,to refuse to be cast as male, female or transsexual."*

# 2001 Diploma@Köln International School of Design

## Virtual body Representations, inspired by Cyperfeminist Visions

---

Analysis of the **Online-Role-Playing Game LambdaMOO** with a text-based interface

```
Available genders: neuter, male, female, either, Spivak, splat, plural,  
egotistical, royal, or 2nd
```

Offer of 10 gender categories

Default gender category: ,neuter`

Category of `genderlessness': Spivak

LambdaMOO was founded by Pavel Curtis at Xerox Parc in 1990; at that time, online role-playing games became very popular by social scientific scholars who examined issues like the cultural construction of bodies and identities; the "Spivak" Category might be inspired by the female philosopher **Gayatri Chakravorty Spivak** who is a co-founder of the postcolonial theory that also evolved and spread in the 1990s.

## 2007 Telekom Innovation Lab

### Virtual body Representations of Second Life

Analysis of the **graphical interface and interaction design** of the most popular Online-Role-Playing Game at that time and compared it to LambdaMOO

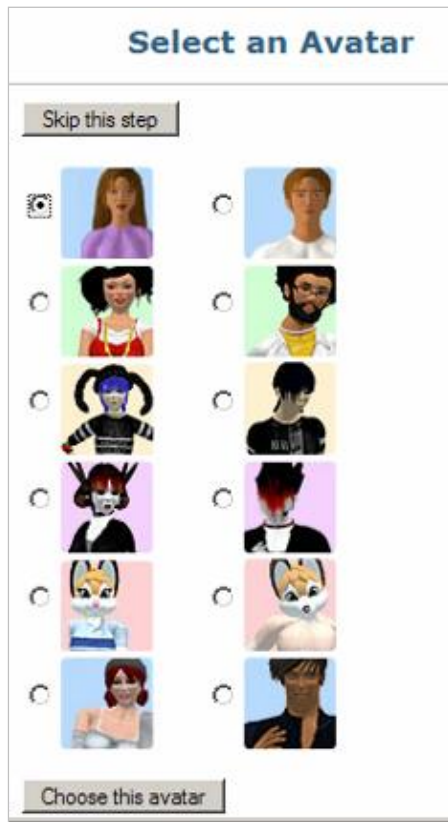

# 2007 Telekom Innovation Lab

## Virtual bodily Representations of Second Life

Analysis of the graphical interface and interaction design of the most popular Online-Role-Playing Game at that time and compared it to LambdaMOO

Default Set of avatars with two gender categories

# 2007 Telekom Innovation Lab

## Virtual bodily Representations of Second Life

Analysis of the graphical interface and interaction design of the most popular Online-Role-Playing Game at that time and compared

The Appearance Editor can be used in order to produce queer-inter-transsexual bodily representations.

Appearance editor with two gender categories

## 2007 Telekom Innovation Lab

# Cyberfeminist Evaluation of Second Life and LambdaMOO

---

The attempt to create inbetween-, trans- or mixed gendered avatars was a play against the binary and heterosexual gender norm inscribed in the interface and interaction design of Second Life

### **Conclusions about the semiotic code in reference to gender performativity/ Cyberfeminist visions**

- text based interfaces are much more suitable to deconstruct binary gender representations in favour for postmodern, fluid, plural and dynamic identities, because they allow to design identities progressively during communication
- graphical user interfaces have a much more iconic quality that fixe your gendered identity based on details of outer appearances

Second Life's can be regarded as a betrayal of cyberfeminist visions because it its gender scripts do not really allow for new forms of identities, gendered and bodily experiences

# 2007 Thinking about Design Research from a feminist view in theoretical and methodological terms

---

## My Research Questions:

- How can Feminism contribute to Design?
- How can concepts and approaches from gender studies, feminist science and technology studies guide design processes?
- Which existing design approaches correspond to feminist requirements and therefore can be tailored to or specified for a feminist design research and practice?
- What makes a Designer a power critical and gender ware Reflective Practitioner (Donald Schön 1984)?
- What makes the result a feminist artefact?

# Design Research – an Oxymoron/ an inherent contradiction?

Klaus Krippendorff\* (2007)

---

- Criticism about the imprudent transfer of concepts and paradigms from other disciplines into design that produce incommensurabilities.
- While **natural sciences** aim at explaining and describing the way the world is (status quo), design strives for something that could or should be (projection)
- So, when traditional, objectivist concepts of science and research are transferred to design, the answer to the question above is:

Yes, design research  
is an oxymoron.

\*Professor for Cybernetics, Language, Culture at the University of Pennsylvania

# Design Research – an Oxymoron/ an inherent contradiction?

## Referring to feminist Concepts of Science and Research....

---

... the answer is:

No!  
Design research  
is not a contradiction.

# Feminist Concepts of Science and Research result from...

---

# Feminist Concepts of Science and Technology

consider that facts and artefacts are made by humans

---

They are related to human experiences that are embodied and gendered.

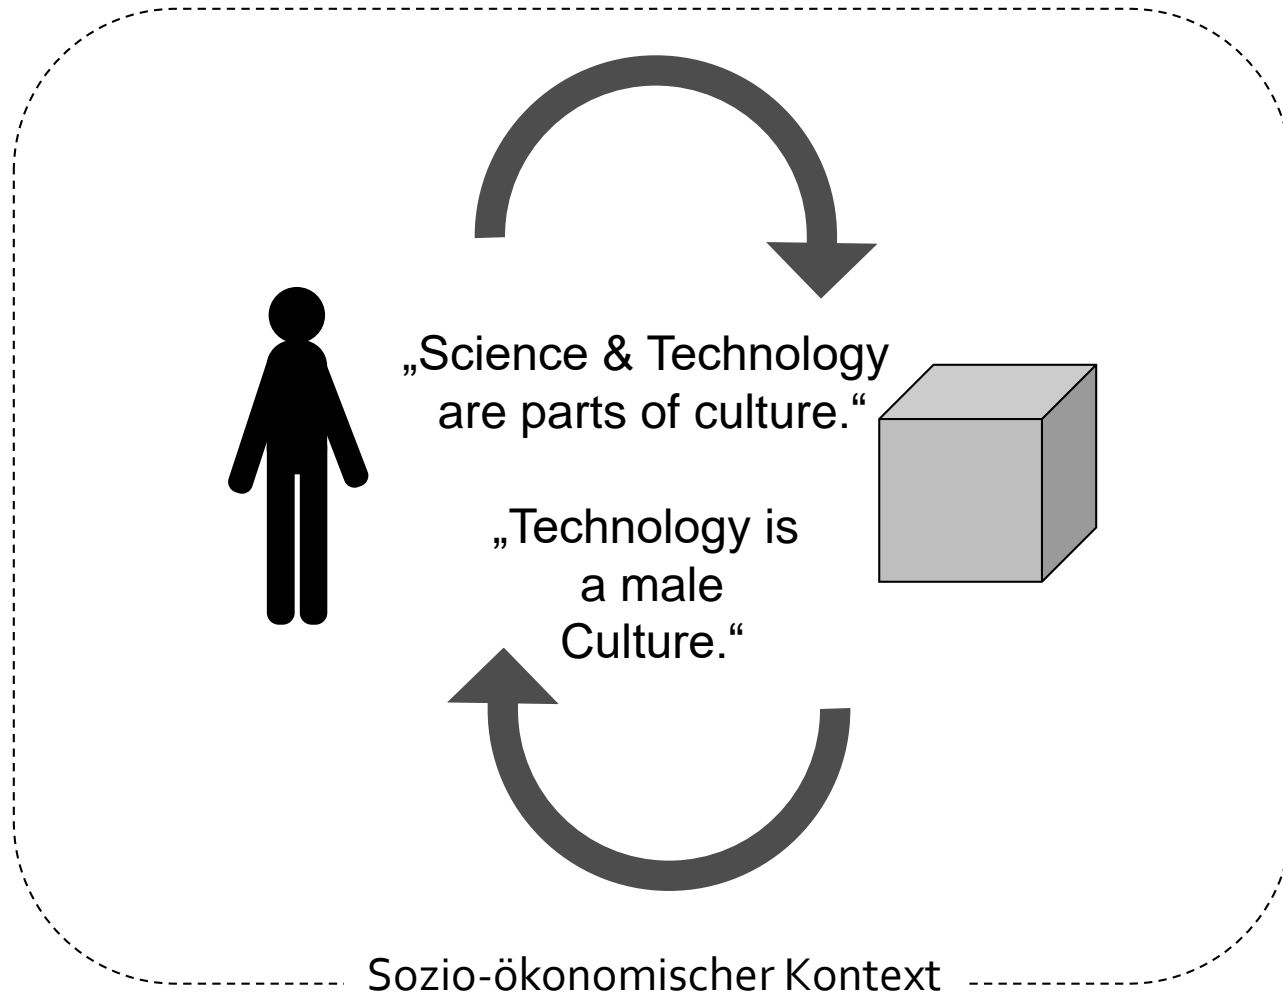

# Feminist Science and Technology Studies (STS)

## Co-Construction of Society, Science, Technology and Gender

---

# Science and Technology from a feminist View

## Facts and Artefacts

---

- ....are neither objective nor neutral.
- ....are made by humans and relate to a certain time and context.
- ...mirror the conditions, power structures and gender order of the respective context.
- ...are just ‚Situated Knowledges‘ (Donna Haraway) that base on parameters like contextuality, perspectivity, partiality, situatedness

# Science and Technology from a feminist View

## Facts and Artefacts

---

- ....are neither objective nor neutral.
- ....are made by humans and relate to a certain time and context.
- ...mirror the conditions, power structures and gender orders of the respective context.
- ...are just ‚*Situated Knowledges*‘ (Donna Haraway) that base on parameters like contextuality, perspectivity, partiality, situatedness
- ...that corresponds to the **Parameters of Design Research and Practice:**

Designers create their (arte-)facts with regard to a certain target group (perspective, partial) assuming certain properties, skills and purposes of use (embodied, gendered, situated, contextual).

# Science and Technology from a feminist View

## Facts and Artefacts

---

- ....are neither objective nor neutral.
- ....are made by humans and relate to a certain time and context.
- ...mirror the conditions, power structures and gender order of the scientific context.
- ...are just *'Situated Knowledges'* (Donna Haraway) that base on parameters like contextuality, perspectivity, partiality, situatedness
- ...that corresponds to the **Parameters of Design Research and Practice:**  
Designers create their (arte-)facts with regard to a certain target group (perspective, partial) assuming certain properties, skills and purposes of use (embodied, gendered, situated, contextual).

Design is feminist!

# Science and Technology from a feminist View

## Facts and Artefacts

---

- ....are neither objective nor neutral.
- ....are made by humans and relate to a certain time and context.
- ...mirror the conditions, power structures and gender orders of the respective context.
- ...are just ‚*Situated Knowledges*‘ (Donna Haraway) that base on parameters like contextuality, perspectivity, partiality, situatedness
- ...that corresponds to the **Parameters of Design Research and Practice:**

Designers create their (arte-)facts with regard to a certain target group (perspective, partial) assuming certain values and norms. They use (embodied, gendered, situated, & ...)

Referring to feminist epistemologies, justify design research and practice as a scientific discipline that was a controversial issue within the discipline itself for a long time.

## Following Sharon Bardzell, a feminist HCI Researcher...

---

„Feminism is a natural ally to interaction design, due to its central *commitments to* issues such as agency, fulfillment, identity, equity, empowerment, and social justice“  
(Bardzell 2010: 1301)

**How can feminist Epistemologies  
inform Design Research & Practice?**

# Feminist Epistemologies, their Gender Concepts & Focus and Consequences for the Design of Technologies

## Eco-Feminism

Rejection of technology based on male values that are destructive, exploiting  
**>Design on female values provide better technology**

## Liberal Feminism

Women needs technological training to overcome deficits resulting from their socialization/ education, the way they are treated and grow up  
**> Technical Training for women**

## Feminist Standpoint Theory

Technology is a result of patriarchal und capitalist conditions that ignore women's experiences and disadvantage their use of technology  
**> Design for marginalized users, e.g. women**

## Poststrukturalist Feminism / Cyberfeminism

Co-Construction of Gender und Technology **> New ways of doing design and using technology as possibilities to establish new gender-technology-identities and relations**

## Agential Realism/ Technofeminism

Socio-material intraactions within networks of distributed agency between human and non-human actors **> Establish socially fair and ecologically sustainable human-machine-configurations** 32

New materialism is one essential epistemological reference point

...they all together nurture the techno-/cyberfeminist vision that technology design can be used as means for feminist ends\*, to make the world a better place for everyone, humans and non-humans.

Approaches of critical computing  
Provide the methodical basis

# Results of my PhD Thesis

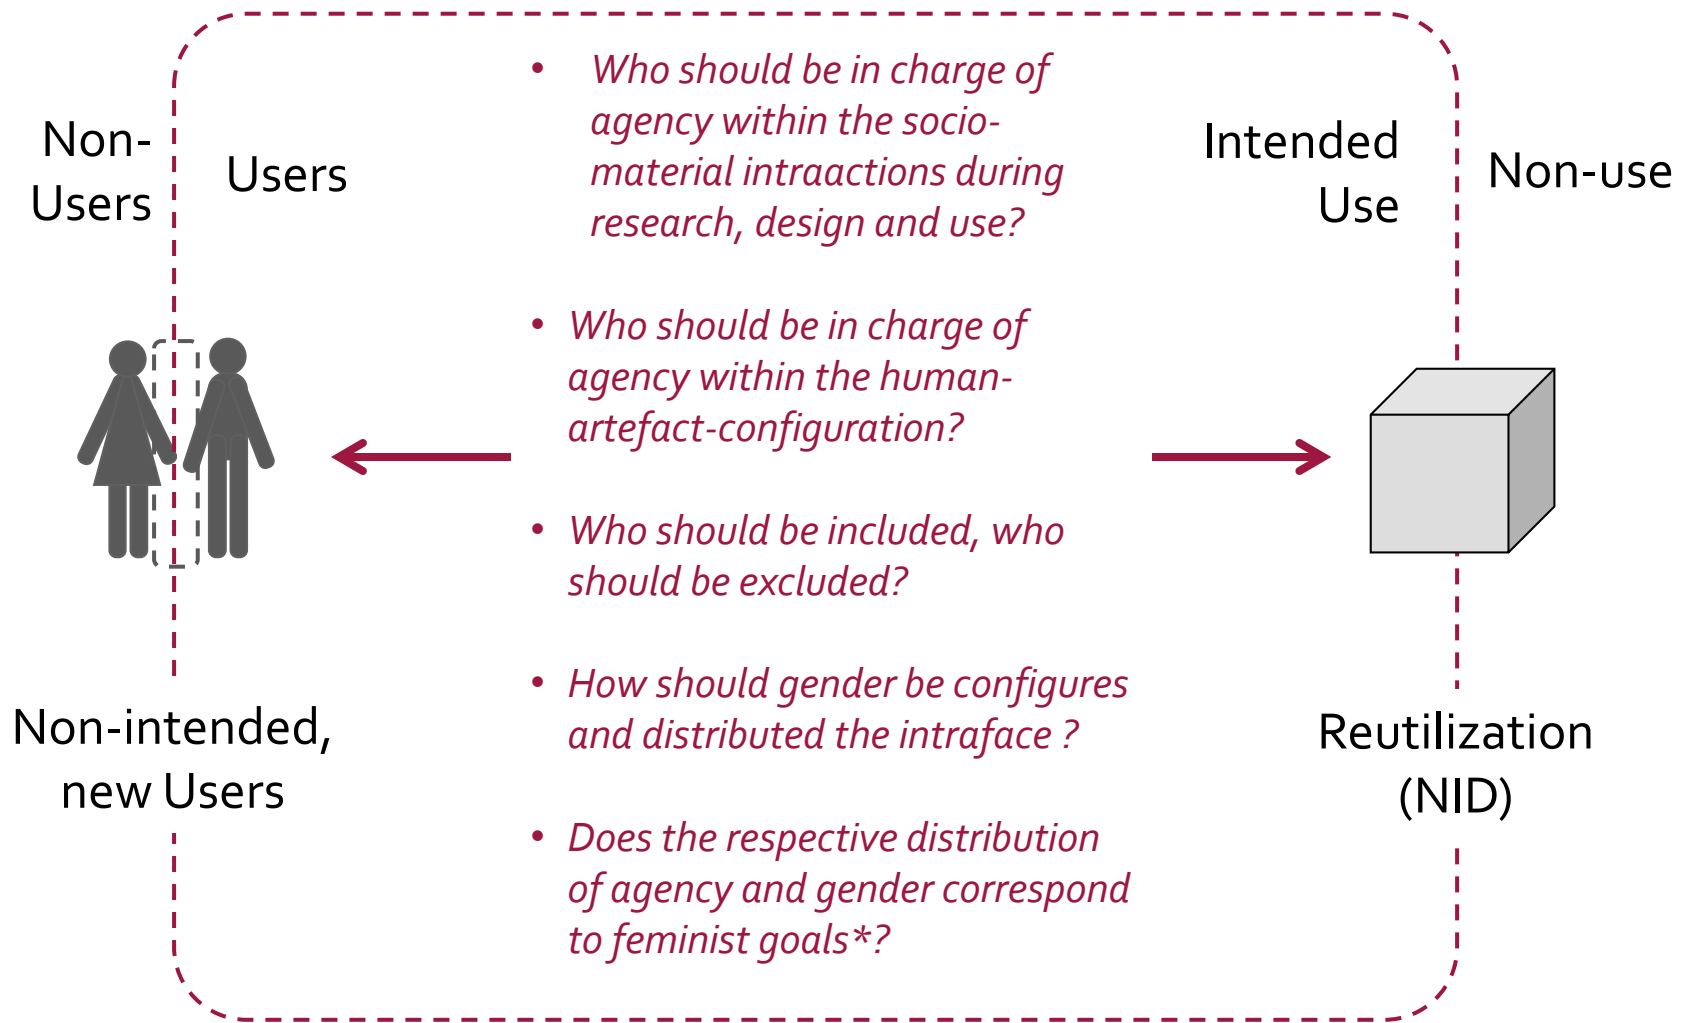

## My feminist Design Research & Development Framework (FEDELOP)

---

- **3 dimensional Modell of Design Research & Practice**
- **Feminist Checklist:** Recommendations for a power critical and gender aware reflection, evaluation and methodical organization of research and design processes
- **Agential-feminist Concept of Design as socio-material Intraaction Design**
  - Design as practice of gendered materializations
  - Design as boundary making activity that decides about inclusions and exclusions
  - Designers as powerful and responsible actors/ participants within the production of facts and artefacts

# Using FEDELOP supports answers to the question:

## How should agency be distributed with socio-material intraactions?

\*social justice, gender equality, social participation, inclusion, critical reflection, empowerment and freedom of action

# Points of Criticisms and Discussions

# Points of Criticism

---

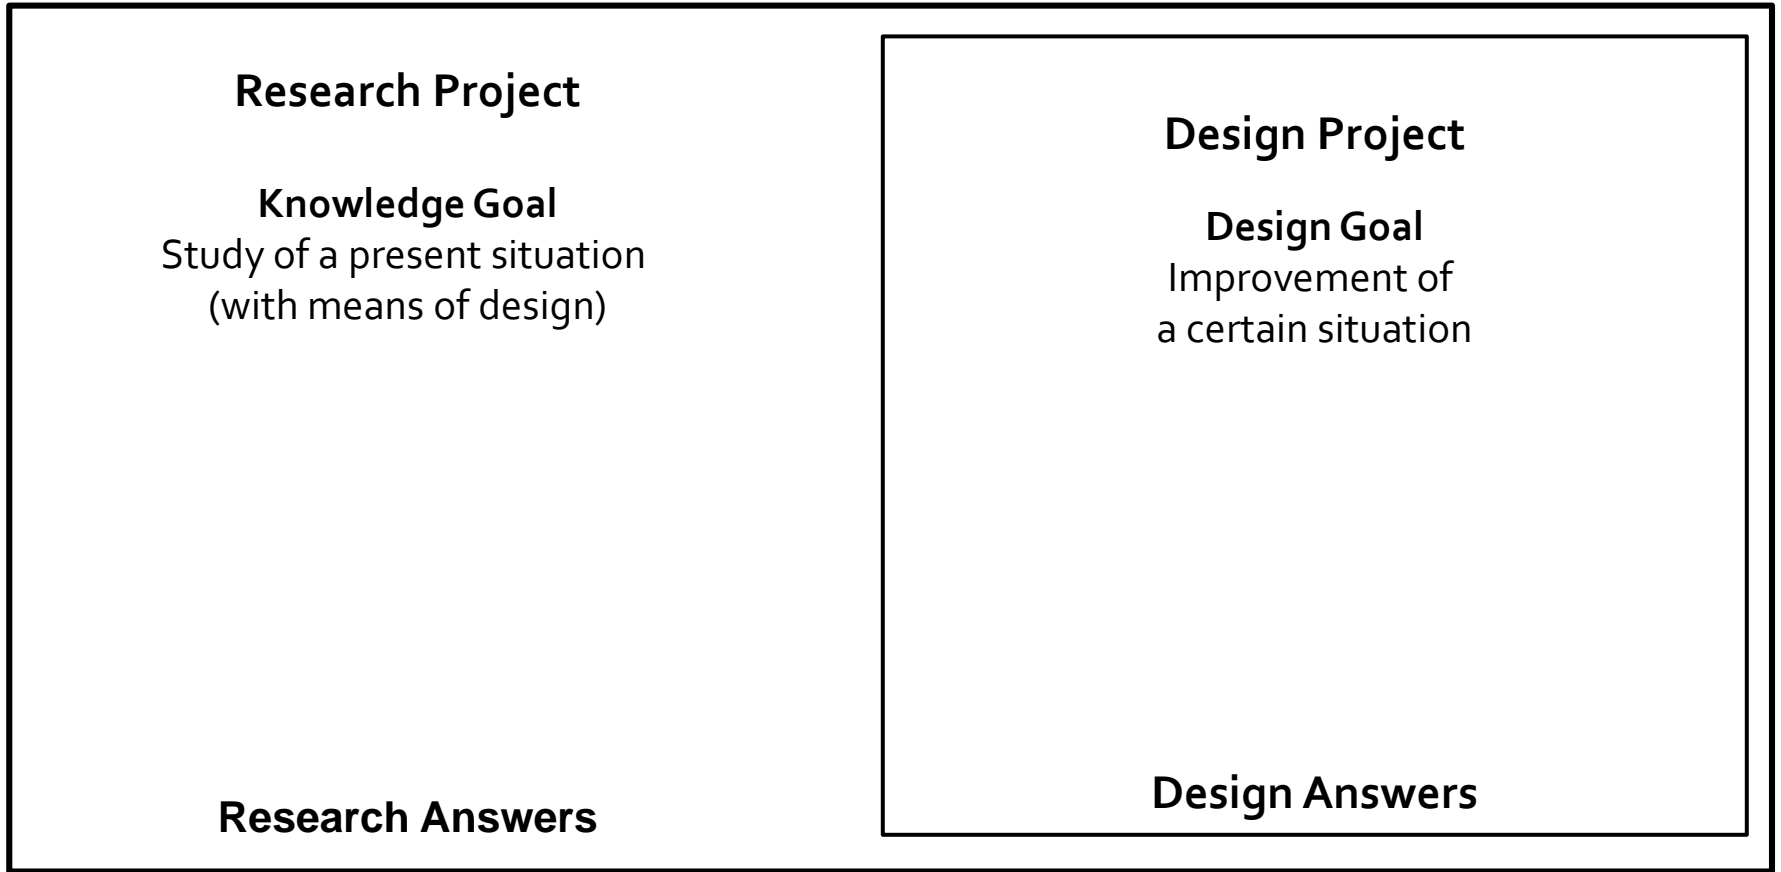

- It tries to establish Design Research & Practice as a boundary-making and -shifting activity, naming it **Intraaction Design** in reference to Barads terminology, but refers to entities like designers, users, artefacts. What do you think about that? How to handle that?
- What is the benefit of thinking about **technology design as intraaction design**? Just an (empty) play with words and terms?
- Generally speaking: What does new materialism contribute to a power critical and gender aware technofeminist research & practice? What does it really modify and change?
- Thinking about power relations and power distribution I often ask myself as a feminist design researcher: How much am I allowed to express my own point view and to implement my own desires/ imaginations of a perfect world into the design process and finally into the designed result?

## Outlook

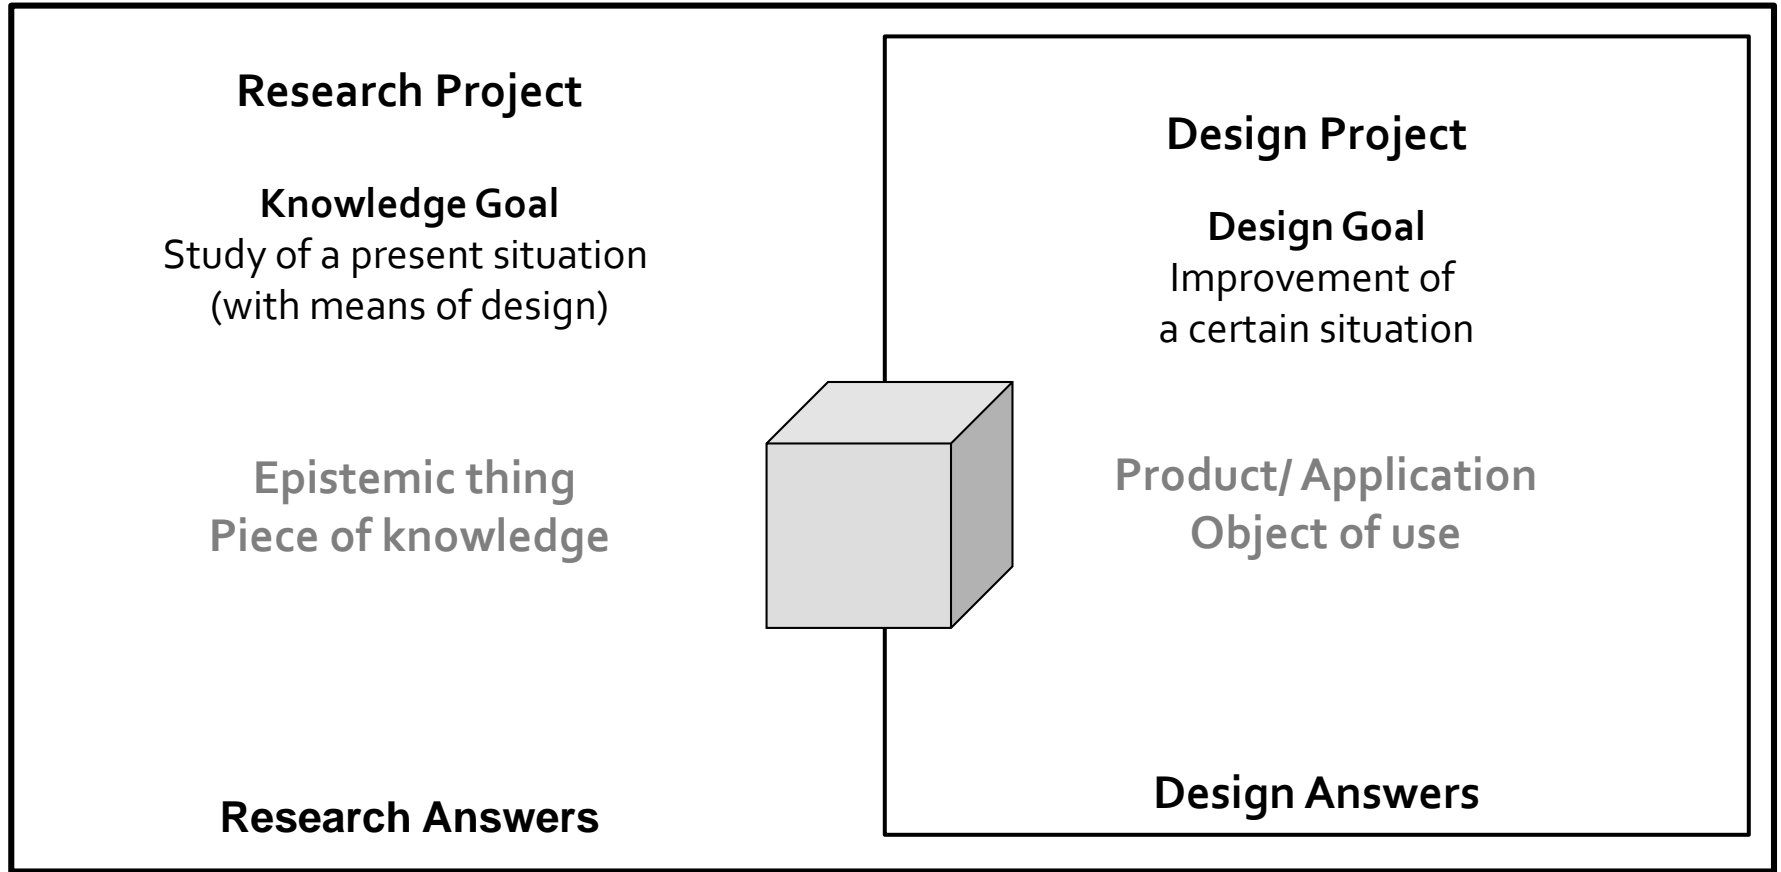

What about “Research through Design” as  
a Model of Technofeminist Research & Practice?

# “Research through Design”

---

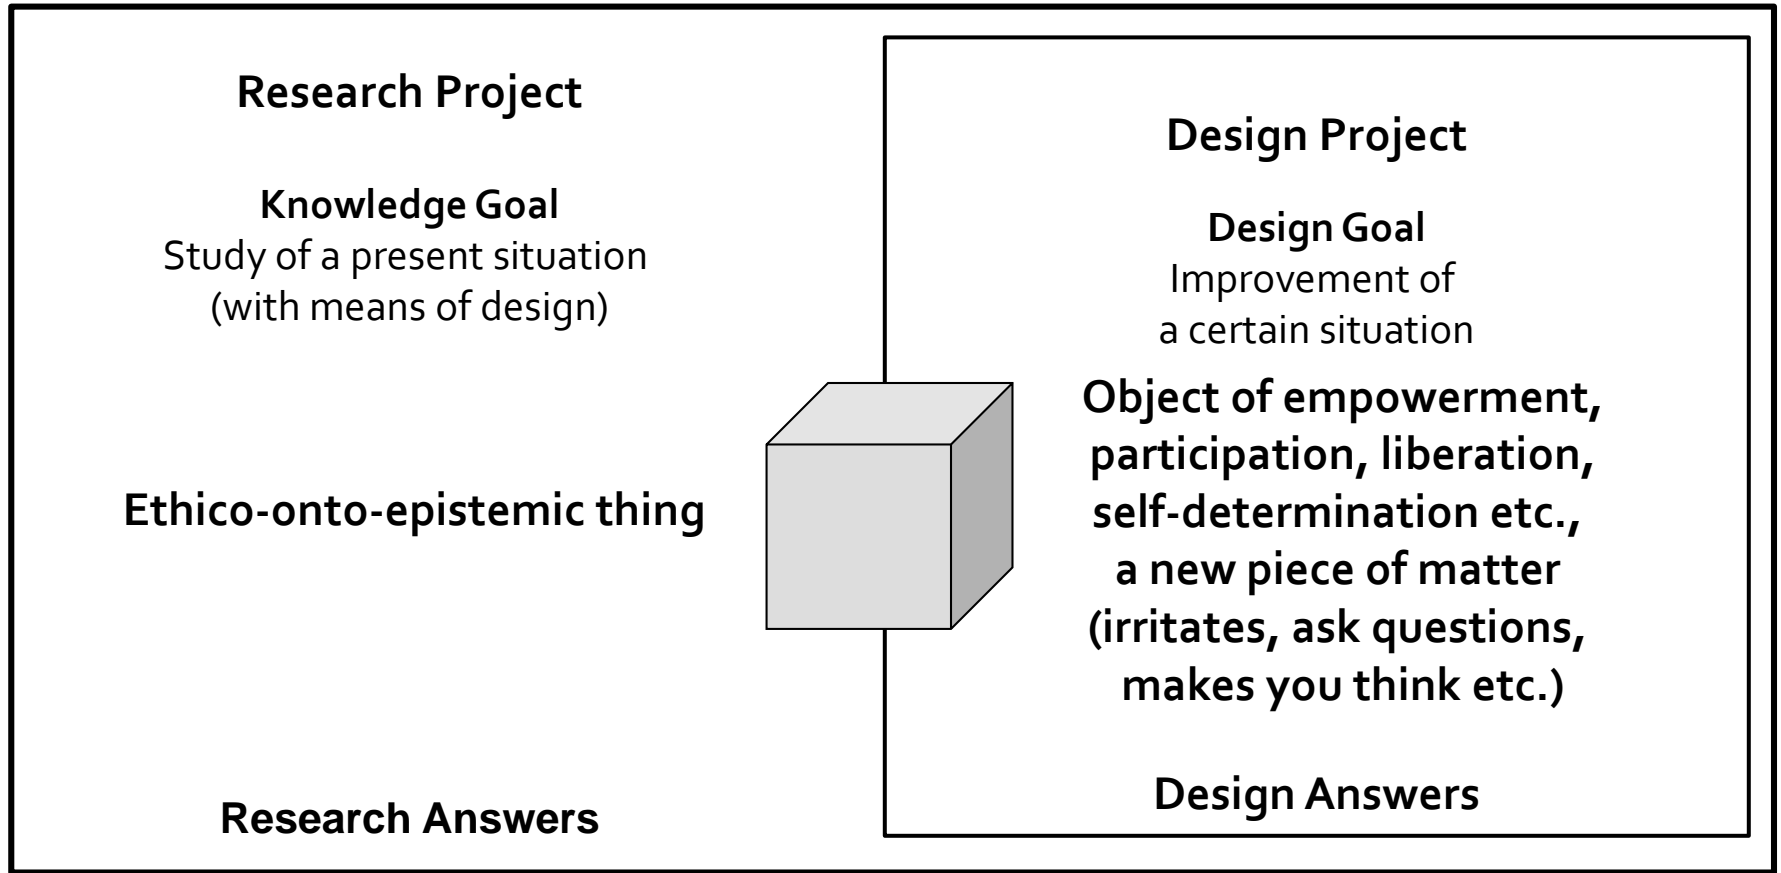

# “Research through Design”: The Artefact has a double role.

# “Research through Design” as a Model for Technofeminist Research & Practice

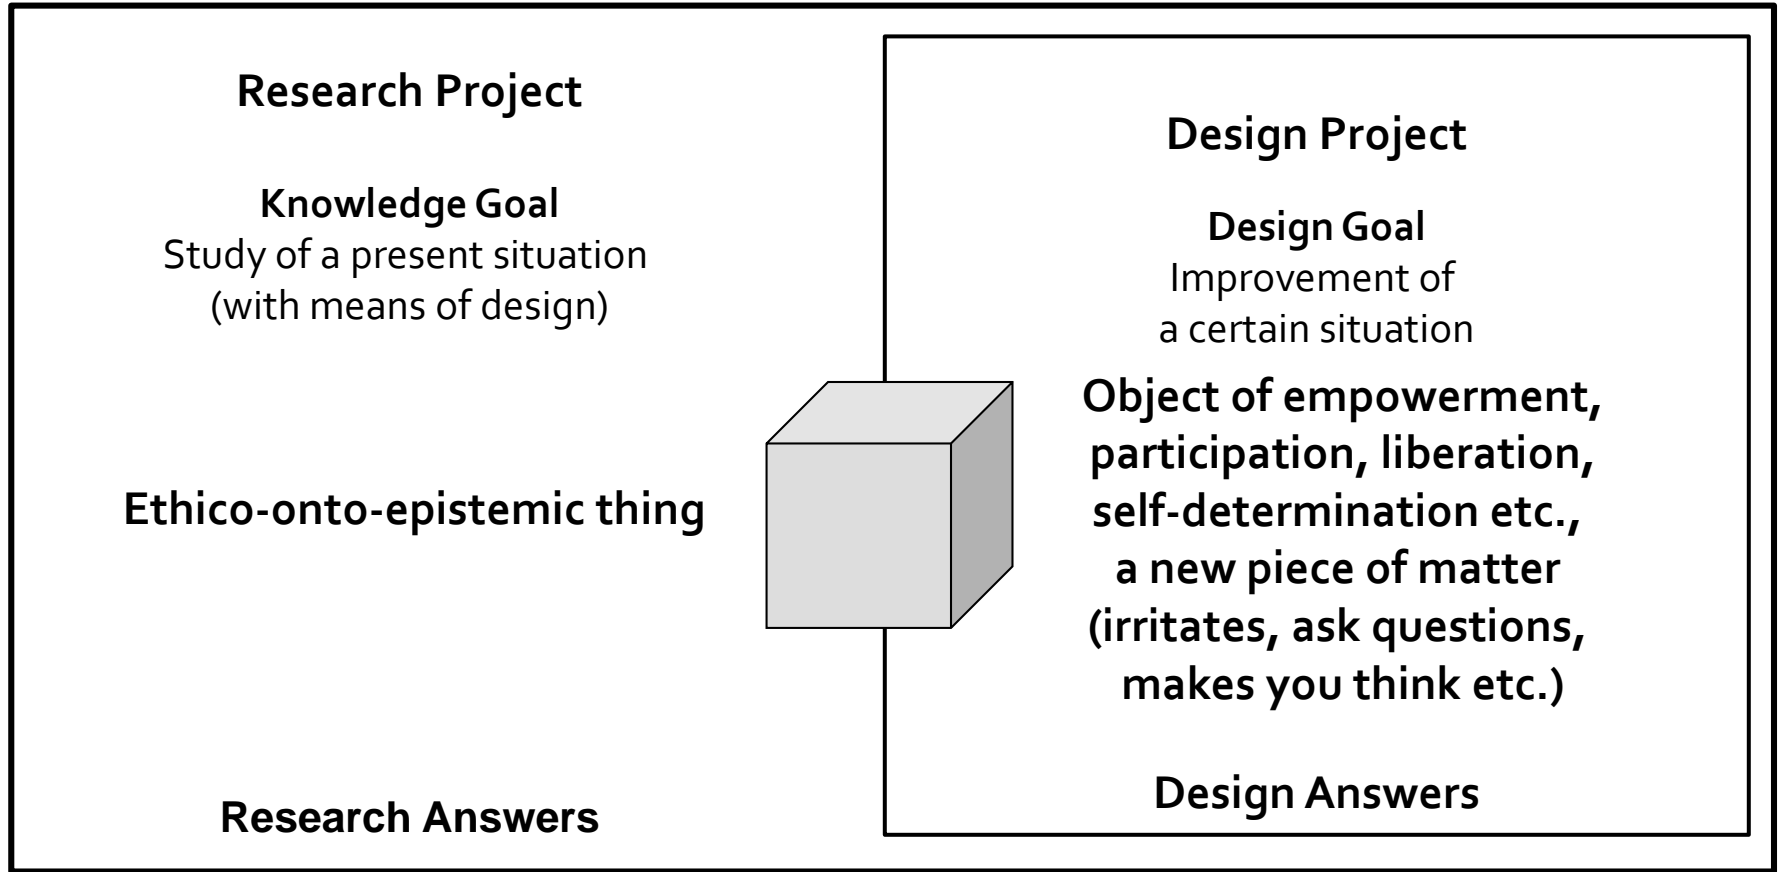

May offer possibilities to bridge or even transcends gaps between theory & practice, reflecting and acting, academia & everyday life? An change the artefact into an...

# “Research through Design”

# “Research through Design” as a Model for Technofeminist Research & Practice

May offer possibilities to bridge or even transcends gaps between theory & practice, reflecting and acting, academia & everyday life? An change the artefact into an...

When we regard the artefact as an epistemic thing (another form of materialized knowledge), it questions the differentiation between basic and applied research, doesn't it?

**Thank you for your attention**
