

JOIN A SYSTEMIC CO-INQUIRY!

WHAT MIGHT IT MEAN TO BECOME A SYSTEMS THINKING PRACTITIONER IN THE FIELD OF AGRICULTURE, ECOLOGY & SOCIETIES?

Workshop with Prof. Ray Ison Emeritus Professor of Systems at the UK Open University

The workshop is designed and conducted as a systemic co-inquiry into the anticipated future professional practices of each of the participants. This means you will be active learners in the activity and will be exposed to a range of perspectives based on group diversity.

You will have opportunities to develop some fresh perspectives on how we understand what it is to be a human being who is also a practitioner and to appreciate and extend your current levels of **systemic sensibility, systems literacy and *systems thinking in practice (STiP) capability***. You will also critically explore how agriculture/farming situations are framed by you and others and critically consider potential contributions of your future professional practice to help meet global change and governance challenges – particularly at the interface of social and biophysical (environmental) dynamics.

Organized by the Section *International Agricultural Policy and Environmental Governance (FB 11)*

FRI, 25.04.2025, 2PM-5PM
