#### **Environmental Engineering Education in Bangladesh**

Bangladesh is a country, which is suffering from different types of environmental problems. Recently, the climate change issues are making it much more critical to survive in the future. To sustain in such an adverse environment, Environmental Engineering education should be explored to invent & develop our own technology to counteract the environmental challenges.

#### Courses to be Offered

## **Compulsory Courses:**

## **Challenges in Disaster Engineering**

Highlights sciences of major types of disasters (i.e. earthquakes, cyclones, flood, tsunami, etc) and their impact of natural disasters on engineered and non-engineered structures in Bangladesh

#### **Challenges in Environmental Engineering**

**D**iscusses challenges for the environment, i.e., water resources, energy, population, agriculture, land degradation, etc.

#### **Advanced Numerical Modeling**

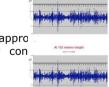

Emphasizes geometric and material nonlinearities in structural mechanics for conducting static and dynamic analysis of civil engineering structures

#### **Advanced Mechanics**

**C**overs advanced theories of solid & fluid mechanics.

#### **Project Management and Controlling**

Focuses on advanced project management approfinance, plan, design, construct, monitor conprojects

#### **Optional Courses:**

#### **Waste Reduction & Control**

Focuses on waste Management, waste minimization, advanced and complex waste treatment methods and waste conversion techniques.

#### **Human Water Resources**

**Natural Preservation and Human-Nature Interaction**Highlights human interaction on nature, evaluation images of urbanized cities, pattern of urbanization using GIS and environmental planning and control.

#### Earthquake Engineering

Covers seismology, seismic design of structures, seismic assessment & strengthening of structures, and modern seismic robust concepts.

#### **Flood Control**

Focuses on flood modeling, flood routing & forecasting, flood control & management, flood resistant rural infrastructures.

## Wind Engineering

Emphasizes nature of wind induced

vibrations & their damages to structures (engineered and non-engineered), advanced approaches of wind resistant design of structures, and their strengthening against wind-induced vibrations.

Table-1: Academic Curricula

	Semester	Compulsor y Courses (Cr)	Optional Courses (Cr)	International Schools (Optional)
	Pre- Semester	-	-	-
	I	4 Courses @ 3 Cr = 12	-	8hrs Summer/ Winter Schools
	II	1 course @ 3 Cr= 3	3 Courses @2 Cr = 6	-
	III	-	3 Courses @2 Cr = 6	8 hrs Summer /Winter Schools + 8 hrs Summer/ Winter Schools
Ö	V	-	-	-
jit.	otal	15	12	24hrs International Summer/ Winter Schools

#### Table 1: Academic Curricula (Contd.)

Semester	Language Training	Thesis (Cr)	Total (Cr)
Pre- Semester	German-I	-	-
I	Intermediate German-I	1	12
II	Intermediate German-II	3.0	12
III	-	6.0	12
IV	-	12.0	12
Total	-	21.0	48

# **Faculty Members**

Prof. Dr. Md. Saiful Islam

Structural Engineering, Concrete Technology

**Prof. Dr. Mahmood Omar Imam** Transportation Engineering, Project Management & Control

**Prof. Dr. Md. Jahangir Alam** Structural Engineering, Earthquake Engineering

Prof. Dr. Swapan Kumar Palit

Transportation Engineering, Environmental Engineeri

Prof. Dr. Md. Hazrat Ali

Modeling, Optimal Water Management

**Assoc. Prof. S. M. Farooq** Geotechnical Engineering

Assoc. Prof. Dr. Md. Robiul Alam Structural Engineering

Computational Mechanics

**Dr. Md. Abdur Rahman Bhuiyan**Bridge Engineering, Earthquake Engineering.

# **Participating Universities**

# University of Kassel (UNIKA), Germany

UNIKA offers a broad range of studies covering the engineering, natural and social sciences as well as the arts to a total of about 17000

students on three campuses. Its civil engindepartment offers BE & MS programs with specializ in structural engineering, construction manage traffic planning & management and environr engineering. Structural Engineering students from a Germany can specialize in earthquake engineering e-learning environment. Its structural laboratory unique testing capabilities on its 7x14m strong reaction frame.

Chittagong University of Engineering & Techn (CUET), Chittagong, Bangladesh

CUET is one of the prestigious degree awarding universities in

Bangladesh. There are 7 engineering departments, one institute of energy technology and three centers, namely, Earthquake Engineering Research Center (EERC), Center for Environmental Studies and Engineering (CESE) and Center for Information and Communication Technology (CICT). The department of Civil Engineering offers BE, ME, MS & PhD degrees. There are outreach programs to create disaster & environmental awareness of citizens. Research in disaster mitigation has focused on earthquake, flood, cyclone, landslides. Research on environmental engineering focuses on river pollution, arsenic contamination, potable water, waste and waste management.

# Shajalal University of Science & Technology (SUST), Syhlet, Bangladesh

SUST was started in 1991 with 3 departments and now there are 21 departments in 7 faculties with 450 faculty members and 10000 students. The department of Civil & Environmental Engineering offers

BE, ME, MS degrees. Teaching & research is supported by specialized labs: structural, geotechnical, environmental, transportation, water resource which perform quality control for industry.

# **Admission Requirements**

For admission into Master of Science in Disaster and Environmental Engineering degree, a candidate

- a) Must have at least one first class/first division (CGPA 3.0 out of 4.0) in any public examination,
- Should have at least CGPA of a minimum of 2.65 out of 4.0 or its equivalent in B.Sc. Engg. in relevant branch,
- Must not have third division/class in any public examination, and
- d) All candidates should submit a written research proposal.

# **Scholarships**

Scholarships will be provided to deserving full-time students.

# **Sponsors**

- a. German Academic Exchange Program (DAAD)
- **b.** Shajalal University of Science & Technology (SUST), Bangladesh.

- c. Chittagong University of Engineering Technology (CUET), Bangladesh.
- d. Kassel University, Germany.
- e. United Nations Development Program (UNDP)

#### **Admission Deadlines**

1 <sup>st</sup> Announcement for	16 August 2010	
application		
2 <sup>nd</sup> Announcement for	Within 15 Sep, 2010	
application		
Application submission	18 October, 2010	
deadline	•	
Selection of candidates for	28 October, 2010	
admission:	•	
Publication of eligible	1 November, 2010	
candidates		
Registration	10 & 11 November, 2010	
German Language Camp	12 Dec- 31 Dec, 2010	
	,	
Inauguration of the course	9 January, 2011	
and class startt	• •

# Admission Brochure for Master of Science in Disaster & Environmental Engineering Program

Bangladesh is one of the most disastrous countrie world with respect to disaster vulnerabili environmental challenges, because it is a country disaster and environmental hazards: such as. floods, earthquakes, draughts, river pollution and arsenic ground water contamination; which are juslist of the problems a diploma or bachelor engine without any preparation upon entering into Compounded by an unchecked and unplanned deve a very grave situation has arisen over the past 3 which severely jeopardizes the country's su economic and social developments. Only if enginee educational levels can cope with such challe sustainable development can be reached eventua engineers with diploma degrees typically construction sites as supervisors. Their ed qualifications are limited to basic engineering skills. not include knowledge on disaster engineering is: seismically safe construction or environmental p issues like water resources management, water tr arsenic problem, river pollution & flood mitigation engineers with bachelor degrees usually work and construction implementation planning, b knowledge relating to engineering issues concerning and environmental challenges is also limited or of existent. Masters level students are mainly towards academic careers at universities. **Doctoral** are very rare. Many students often obtain their ( degrees from abroad and don't come back. This "bra will only stop, if excellent regional academic cer developed where the scientific challenges of the cou be tackled with sufficient resources.

# **Disaster Engineering Education in Bangladesh**

It is now well recognized that Bangladesh is one most vulnerable countries to climate change and searise. Natural disasters exert an enormous to development. The linkage between development disaster risk are not difficult to visualize, so to adap become fully prepared for such challenges diengineering education is indispensable now.
