Study in Europe, ERASMUS 2023

The Institute of Materials Engineering (Metallic Materials) offers the possibility to do a thesis at a partner university in another European country within the framework of a Socrates/Erasmus program. The cooperation of the institutes results from the common research foci in the field of materials engineering, which are partly closely linked to the issues of manufacturing and production engineering. The topics of the projects to be carried out are based on the current focal points of the partner institutes and are partly carried out in close cooperation with industry. The 4-5 month stay abroad is funded as a scholarship within the framework of the Socrates/Erasmus program.
